

CODAKID
AI AGENTS & VIBE CODING
SUMMER CAMP

Parent & Guardian Setup Guide

Everything to set up before Day 1

Estimated setup time: 15–30 minutes

Welcome!

Thank you for enrolling your student in the CodaKid AI Agents & Vibe Coding Summer Camp! Before Day 1, there are a few quick setup steps that need to be completed by a parent or guardian.

This guide walks you through everything. The entire process usually takes about 15–25 minutes and only needs to be done once before camp begins.

COMPUTER REQUIREMENTS

Before getting started, make sure your student’s computer meets these minimum requirements:

Mac (Apple Silicon)	Mac (Intel)	Windows
 Any amount of RAM is fine All Apple Silicon Macs (M1, M2, M3, M4) are great for this program.	16 GB RAM required Older Intel-based Macs need at least 16 GB of RAM to run smoothly.	16 GB RAM recommended 16 GB of RAM is recommended for a smooth experience on Windows.

How to Check Your Computer’s RAM

Mac	Windows
-----	---------

1. Click the Apple menu () in the top-left corner
2. Click "About This Mac"
3. Look for "Memory" (shows RAM) and "Chip" or "Processor" (tells you if it's Apple Silicon or Intel)

1. Press Windows key + I to open Settings
2. Click System → About
3. Look for "Installed RAM" — it should say 16 GB or higher

SETUP CHECKLIST

1

Create a Google / Gmail Account

A parent-owned or parent-managed account (age 18+) for camp tools and sign-ins.

2

Set Up Google AI Pro

Gives your student the AI access and higher usage limits needed for camp. Set up Google AI Pro before Day 1.

3

Download & Install Antigravity IDE

Install Antigravity IDE, the main camp coding interface students will use throughout camp.

4

Sign In & Confirm GitHub Access

Log in to Antigravity IDE with the same Google account, then make sure your student has a GitHub account ready.

5

Download & Unzip Starter Files

Download the Antigravity Starter Files attached to the setup email and unzip them before Day 1.

Why Does My Student Need My Account?

Many AI tools require an account owned by someone 18 or older. Your student can use your email during camp, or you can create a dedicated email address that is owned and managed by you. Either option works.

Step 1 Create a Google / Gmail Account

Your student needs access to a Gmail / Google account that is owned or managed by a parent or guardian (age 18+). This is required because the AI tools used in camp may have account-age restrictions.

You have two options:

Option A	Option B
Use Your Existing Account Let your student sign in with your current Gmail address during camp. Simplest option.	Create a Dedicated Account Set up a new Gmail just for this camp. Register it under your name (18+). Your student can use it exclusively for CodaKid camp tools.

To create a new Gmail account, visit:

<https://support.google.com/mail/answer/56256>

Important

Whichever option you choose, remember this email address. You will need it for Step 2 (Google AI Pro), Step 4 (signing in to Antigravity IDE), and any Google Docs or Google AI Studio activities during camp. Everything should stay on the same account.

Step 2 Set Up Google AI Pro

Your student should set up Google AI Pro before camp. This gives them the AI access and higher usage limits needed for AI agents, vibe coding, and project building during the 5-day camp.

Subscription Details

Google AI Pro: Use Google's current listed plan and pricing

Billing: Managed through the parent-owned Google account

Commitment: None — cancel anytime, no contract

Keep Google AI Pro active through the end of the 5-day camp so your student can build without hitting AI usage limits.

A. Visit the Google AI Plans Page

Google AI Pro Plans: <https://one.google.com/about/google-ai-plans/?hl=en>

Current Google AI Plans page

B. Select Google AI Pro

Look for the Google AI Pro plan. This is the plan your student needs for camp. Follow Google's prompts to activate or subscribe to Google AI Pro, and use the same parent-owned Google account from Step 1.

Make Sure You're on the Right Account

Subscribe using the same Google account (18+) that your student will be using during camp. If you created a dedicated account in Step 1, make sure you are logged into that account before setting up Google AI Pro.

Step 3 Download & Install Antigravity IDE

Antigravity IDE is the main coding interface your student will use throughout camp. Students will write code, use AI assistance, and manage their projects from this IDE.

A. Go to the Antigravity IDE Page

Download Antigravity IDE: <https://antigravity.google/product/antigravity-ide>

Antigravity IDE product page

B. Download and Install

Download and install Antigravity IDE for your computer type (Mac or Windows). Antigravity IDE is the main camp interface, so make sure it opens before Day 1. If the installer asks to add an additional Antigravity component, you can accept it.

Mac	Windows
1. Install Antigravity IDE: https://antigravity.google/product/antigravity-ide 2. If prompted to add an additional Antigravity component, click Install or Accept 3. Open Antigravity IDE from Applications	1. Install Antigravity IDE: https://antigravity.google/product/antigravity-ide 2. If prompted to add an additional Antigravity component, click Install or Accept 3. Open Antigravity IDE from Start Menu

Mac Users Only — Install Xcode

If your student is using a Mac, you also need to install Xcode from the Apple App Store. Xcode provides essential developer tools that Antigravity and other coding tools depend on.

1. Open the App Store on your Mac (search for it in Spotlight or find it in the Dock)
2. Search for “Xcode”
3. Click “Get” and then “Install” (it’s free, made by Apple)
4. Wait for it to finish downloading and installing (this can take 10–20 minutes as it’s about 7 GB)

Tip: You can start the Xcode download before beginning the other setup steps — it will install in the background while you work through everything else.

C. Open Antigravity IDE and Skip Through Initial Prompts

When Antigravity IDE opens for the first time, it may show setup prompts or walkthroughs. You can skip through these for now — the camp instructor will help students configure their workspace on Day 1.

Step 4 Sign In & Confirm GitHub Access

The final step is to connect Antigravity IDE to the Google account you set up and make sure your student can access GitHub. GitHub is where students will store code and publish their projects with GitHub Pages.

A. Click "Log in" in the Top Right

Look for the "Log in" button in the upper-right corner of Antigravity IDE.

The Log in button in the top-right corner

B. Sign In with Google

A sign-in window will appear. Click "Sign in with Google" and use the same account you used for Google AI Pro.

Sign in with the same Google account

C. Confirm GitHub Access

Visit <https://github.com/> and make sure your student can sign in or create an account. Students use GitHub and GitHub Pages to publish their arcade game and passion project during camp.

A screenshot of the GitHub sign-in page. At the top is the GitHub logo (Octocat). Below it is the text "Sign in to GitHub". There are two input fields: "Username or email address" and "Password". To the right of the password field is a link "Forgot password?". Below the password field is a green "Sign in" button. Underneath is a horizontal line with the word "or" in the center. Below that are two buttons: "Continue with Google" (with the Google logo) and "Continue with Apple" (with the Apple logo). At the bottom, there is a link "New to GitHub? Create an account" and another link "Sign in with a passkey".

GitHub sign-in page

Step 5 Download & Unzip Antigravity Starter Files

Because this setup guide will be attached to your email, please also download the Antigravity Starter Files attachment and unzip it before camp begins.

A. Download the Attached Starter Files

Find the attachment named Antigravity Starter Files in the email and save it to your student's computer.

B. Unzip the Folder

Mac: double-click the .zip file. Windows: right-click the .zip file and choose "Extract All." Keep the unzipped folder somewhere easy to find, such as Desktop or Documents.

C. Do Not Rename the Folder

Students will open these starter files in Antigravity IDE during camp, so please leave the folder name as-is after unzipping.

Use the Same Account

Make sure Antigravity IDE is signed in with the exact same Google account that has Google AI Pro. Then go to github.com and confirm your student can sign in or create a GitHub account with parent help before Day 1.

You're All Set!

Your student is ready to begin the AI Agents & Vibe Coding Summer Camp. On Day 1, the instructor will provide the Student Prompt & Brainstorm Guide and walk students through the first build.

Students will use Google AI Pro, Antigravity IDE, GitHub Pages, and the unzipped Antigravity Starter Files to build and publish projects. You do not need to configure the coding workspace beyond the setup in this guide.

Frequently Asked Questions

How long do I need to keep Google AI Pro active?

Keep Google AI Pro active through the full 5-day camp so your student does not run into AI usage limits while building. You can cancel after camp if you do not want to continue.

Can my student use their own Google account?

The account must be owned by someone 18 or older. If your student already has a Google account that meets this requirement, they can use it. Otherwise, use a parent-owned account.

What if my student already has Antigravity IDE installed?

Great! Just make sure Antigravity IDE opens, then sign in with the Google account that has Google AI Pro. The camp instructor will handle workspace configuration on Day 1.

Is there anything else I need to buy or download?

From the parent side, the main setup is a Google account, Google AI Pro, Antigravity IDE installed on the computer, a GitHub account ready for publishing, and the attached Antigravity Starter Files downloaded and unzipped. Other resources are free or provided by CodaKid unless an optional advanced project later uses a paid API.

What happens if I cancel Google AI Pro during camp?

Your student may lose access to the higher AI usage limits they need for camp projects. We recommend keeping Google AI Pro active through the end of Day 5.
